Press Release

Galaxy Scientific Launches A New “NIR For Food” Website

Nashua, NH (February 9, 2021): Galaxy Scientific is proud to announce the launch of a new knowledge-based website, www.nir-for-food.com, that is devoted to the food industry. The new website was created to better assist and service our worldwide customers and prospective customers in the food industry. The new website offers an abundance of information and is a great resource to learn about the uses of near infrared (NIR) spectroscopy in various food applications. It also signifies Galaxy Scientific’s commitment to success and to providing superb FT-NIR solutions to the food industry.

The new website, www.nir-for-food.com, brings Galaxy Scientific’s deep industry and NIR applications knowledge to its food customer base in an easy to navigate format. Customers can easily search the website by either industry or application to find the appropriate information. They can also use the website to get in touch with Galaxy Scientific’s experts to further discuss the details of their application and learn how they can take advantage of FT-NIR for analysis of incoming materials, outgoing products, and process monitoring and control.

Galaxy Scientific is committed to the success of our customers and invites everyone to check out and explore our new website:

www.nir-for-food.com

Galaxy Scientific Inc. specializes in the development and manufacturing of innovative high-performance portable analytical instrumentation. We have developed a new generation of high-performance field portable platforms which combine next generation optics with advanced software algorithms providing breakthrough solutions to the most challenging point-of-need applications. Samples can then be analyzed in the field, rather than be taken off site to separate laboratories.
